Professional Summary

Backend-focused Software Engineer building large-scale and AI-enabled products with **Go, Java/Spring Boot, NestJS, PostgreSQL, gRPC, and Kafka**. Contributed to a national platform serving **3.5M+ participants** and supporting **40K–50K concurrent users**. Experienced in distributed microservices, **RAG/vector retrieval**, production Linux/Docker deployments, database optimization, and production incident remediation.

Experience

Software Engineer

AML Academy

Aug 2024 – Present

Astana, Kazakhstan

- Built and optimized components of a national online testing platform using **Java/Spring Boot** and **React**, serving **3.5M+ participants** and supporting approximately **40K–50K concurrent users**.
- Designed and implemented a **Go microservice** for suspicious and threshold transaction detection, integrating it with the core AML platform through **gRPC** and **Kafka**.
- Developed an **AML Workstation** and compliance workflows for suspicious transaction analysis using **Go, React/Vue.js**, and **PostgreSQL**.
- Built enterprise HRM modules and secure digital-signature workflows using **Java Spring Boot, Vue.js**, and **PostgreSQL**.
- Optimized PostgreSQL queries and backend execution paths for high-traffic modules, improving production performance and scalability.

Software Engineer

Rocky Rocks

2025 – Present

Remote / Contract

- **AI Job Search Platform:** Designed and implemented a **RAG retrieval pipeline backed by a vector database** to support semantic retrieval and AI-assisted job discovery.
- **Order Management System:** Built backend services and **REST APIs** using **NestJS** and **PostgreSQL**, implementing order-processing and production workflows.
- **Generative Media Platform:** Developed AI-powered image and video generation workflows using **Next.js, Fal AI**, and **PostgreSQL**, integrating frontend flows with backend services.
- Deployed and maintained production applications on **Linux** using **Docker** and **Nginx**.

Software Engineer

Zanger

2025

Remote / Contract

- Developed full-stack functionality for enterprise web applications and digital-signature workflows using **PHP** and **Next.js**.
- Managed production deployments, Linux server configuration, Docker-based environments, and application recovery.
- Identified and remediated a compromised dependency responsible for unauthorized cryptocurrency mining; rebuilt the production server and applied hardening measures to improve security and stability.

Skills

Languages: Go, Java, TypeScript, JavaScript, PHP

Backend & Distributed Systems: Spring Boot, NestJS, Express.js, Microservices, REST APIs, gRPC, Kafka

Data & AI: PostgreSQL, MySQL, RAG, Vector Databases, AI API Integrations

Frontend: React, Next.js, Vue.js

Infrastructure & Tools: Docker, Linux, Nginx, Git, GitHub, GitLab

Education

Astana IT University

Bachelor of Software Engineering

2022 – 2025
